## Diptera

### Stratiomyidae

*Allognosta vagans* (LOEW). Mor. mer., Valtice, edges of a pond, 2. vi. 1973, 1 ♂, leg. J. Olejníček, det. et coll. R. Rozkošný. A widely distributed species known to occur from Central Europe to China, Sakhalin, Kuril Islands and Japan (NARTSHUK & ROZKOŠNÝ, 1976), but apparently very rare in Europe (reliably recorded only from Poland, Germany and Austria). A single specimen originating probably from Czechoslovakia (but without precise data) is preserved in the National Museum in Praha (DUŠEK & ROZKOŠNÝ, 1963). The species is thus now definitively confirmed from Czechoslovakia.

### Milichiidae

*Phyllomyza longipalpis* (SCHMITZ). Mor. mer., Lednice, lowland forest, light trap, 26. v. 1976, 2 ♀♀; 25. vii. 1977, 1 ♂, leg. M. Vaňhara, det. R. Rozkošný, rev. et coll. L. Papp. A little known species, found only in the Netherlands, Poland and recently in Hungary (PAPP, 1977). New record for Czechoslovakia.

### Muscidae

*Limnophora exuta* (KOWARZ). Boh. mer., Nové Hrady, Terčino údolí, 2. vi. 1976, 1 ♀; Mor. centr., Moravian Karst, Býčí Skála, puparia 15. vii. 1969, 1 ♂ ex P 25. vii. 1969; further puparia 19. vii. 1969, 3 ♂♂ ex P 4.viii. 1969; 19. v. 1974, 2 ♂♂, 2 ♀♀; 15. vii. 1976, 1 ♂; all leg. et coll. R. Rozkošný. The specimens taken in 1969 were determined by the late Prof. W. Hennig. The species is distributed in Europe from England and Germany to Sicily. New species for Czechoslovakia.

*Limnophora pulchriceps* (LOEW). Mor. sept., Javorníky Mts., Velké Karlovice, puparia, 8. viii. 1969, 3 ♂♂ ex P 12. viii. 1969, leg. et coll. R. Rozkošný, det. W. Hennig. A rather rare species developing among algae and in the wet moss in stream rapids. Occurring in France, Germany, Hungary, Yugoslavia, Rumania, Turkey and Israel. New species for Czechoslovakia.

DUŠEK J. & ROZKOŠNÝ R., 1963: *Acta Soc. ent. Českoslov.*, 60 : 202–221. — NARTSHUK E. P. & ROZKOŠNÝ R., 1976: *Acta ent. bohemoslov.*, 73 : 128–134. PAPP L., 1977: *Acta zool. Acad. Sci. Hung.*, 23 : 171–181.
